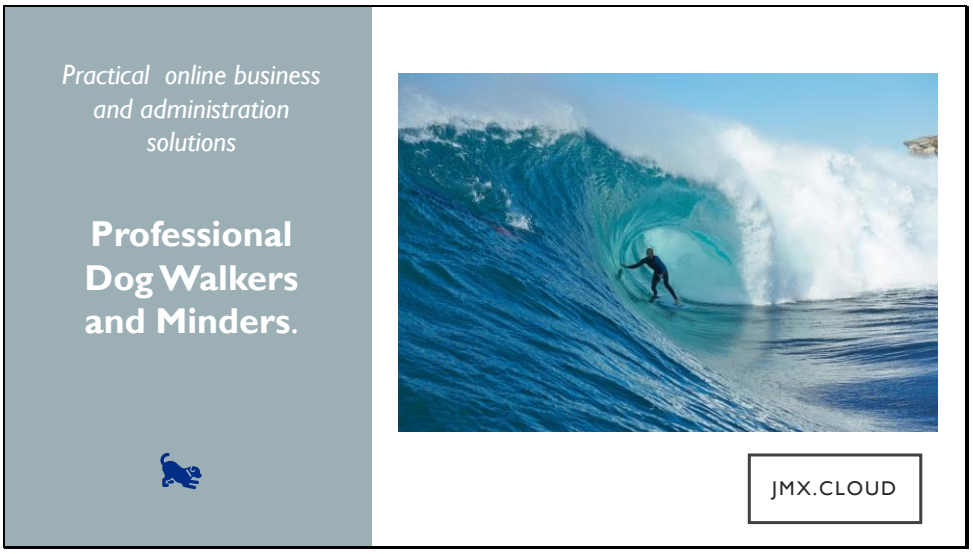
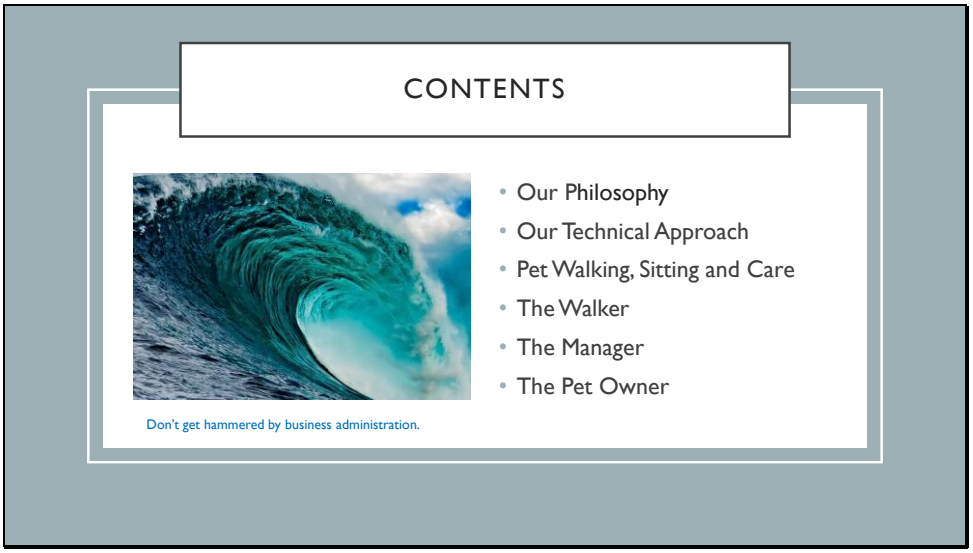
Professional Dog Walkers & Pet Minders



Slide 1 – Opening

Running your own business can be a daunting enterprise, especially when you need to balance the important core of business with back-office administration which at times can be way too time consuming.
Here at JMX we have devised a set of cloud based simple solutions which we believe will help you run your business.

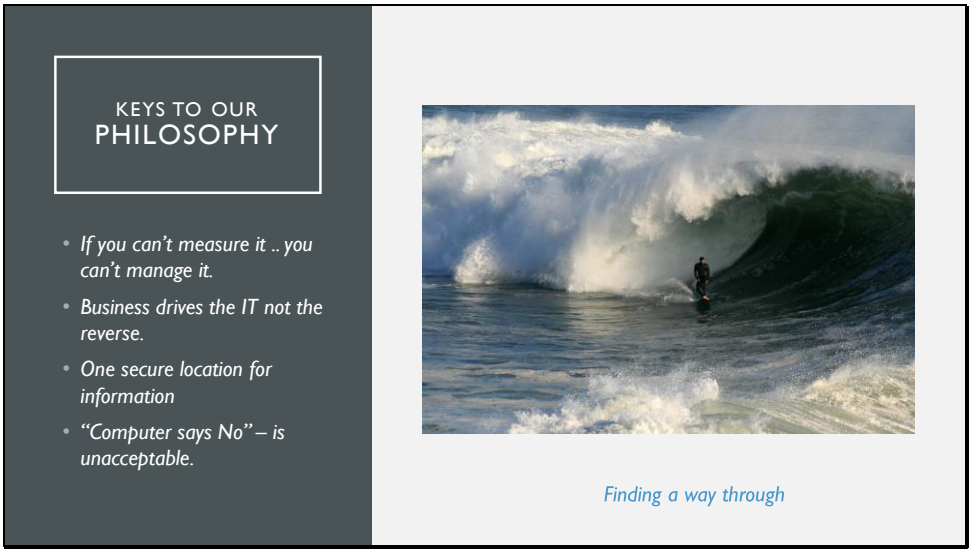
Slide 2



Contents

Our approach, the technology we use, the areas which have solutions and the different views or perspectives of key interested parties.

Slide 3



Slide3 Our Philosophy

Most Business managers – know what they are doing.
The majority of problems occur when vital information is not immediately to hand.

There not enough hours in the day and/or the
supporting system don't all operate the way they should
-
Any one of these can be debilitating to the business.

Slide 4

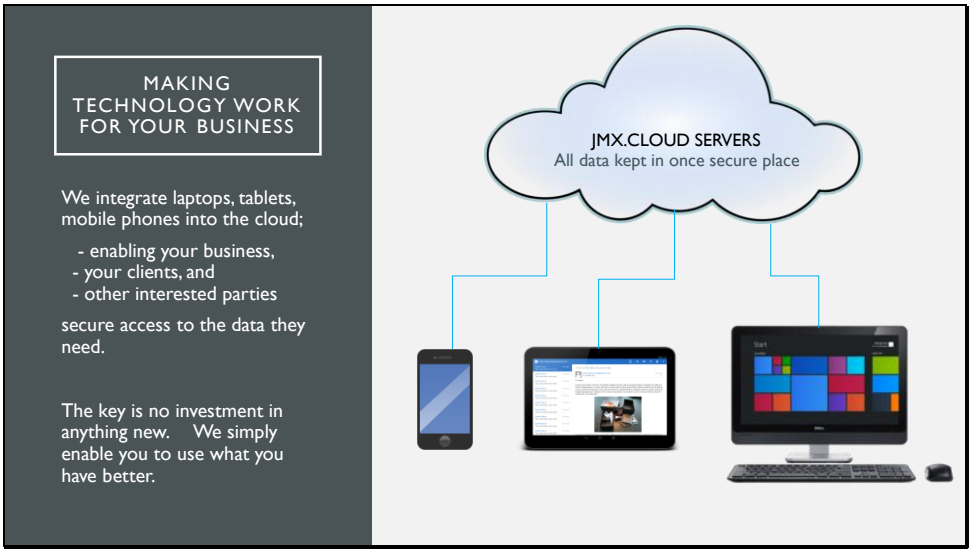
Product Overview

The Pet Walking System is based on the premise - 'data is only entered once' – the system will turn it into bookings, schedules, pickup routes, invoices and yearly statements.

The system can also simply automate bulk orders - so for example – 20 bookings can be entered in 10 seconds – or a expense item including a photo of the receipt entered in 10 tens. – and that's it - it only need to seen again expect by your account or for yourself - some time in the future.

Everything is integrated and all data resides safely in the cloud.

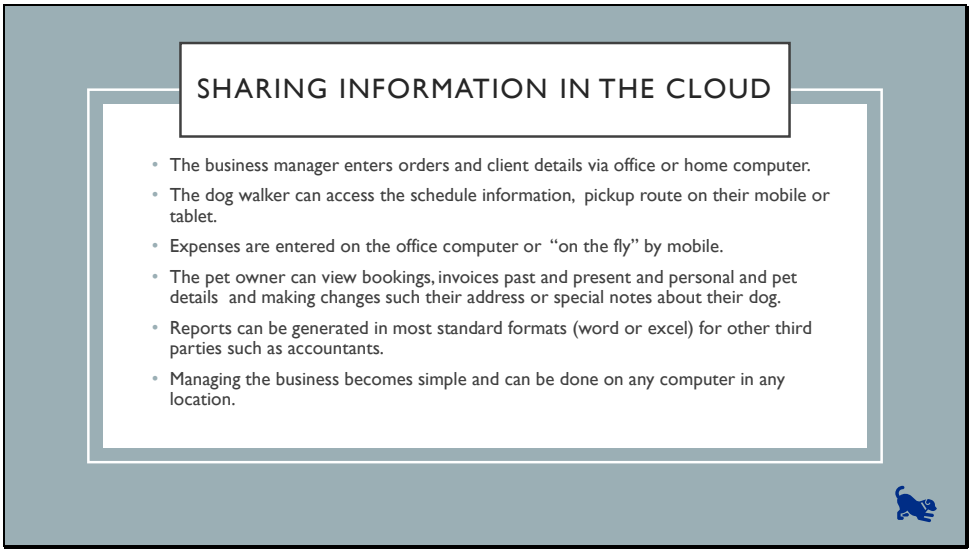
Slide 5



No investments is required – this is actually guess by us - but we have assumed you have some sort of the computer with internet access and some sort smart mobile phone or tablet with Wi-Fi or 4G access.

The key point here is all devices will access to same up-to-date data. This also includes ability edit and creating new records as well as reading them. Different people with difference requirements can access the data at the same time. Maybe a client checking an invoice or the walker picking up the afternoons walk schedule.

Slide 6



Sharing Information

A good illustration of how the system works is to see how the three most interested parties work.

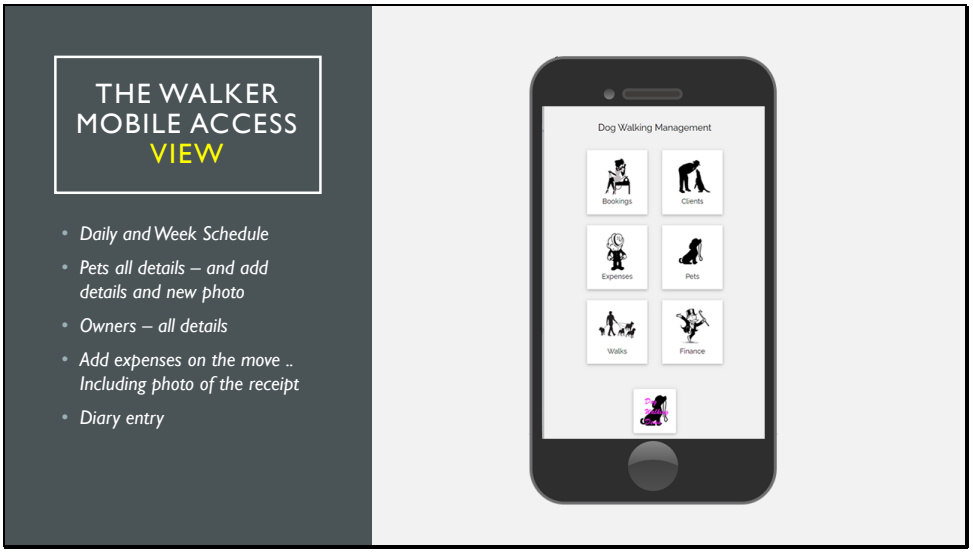
- The business owner will le-ases with client-the pet-owner and enter on the system clients particulars and walking bookings
- The pet owner can review the bookings and edit maybe their address if not exactly correct may be add another contact number or what ever - they can not change a booking – this only be done verbally talking to the business owner.
- The dog walker on a particular days can access the roster for day
- Expenses can be entered on the fly .. ie fuel in the petrol station or via the computer back in the office.
- Periodically other third parties can access the information ie accounts at financial year end.

Slide 7

Management view

This is opening management page …. The home page for management system. You see by clicking on the various items you will enter the different areas.

Slide 8

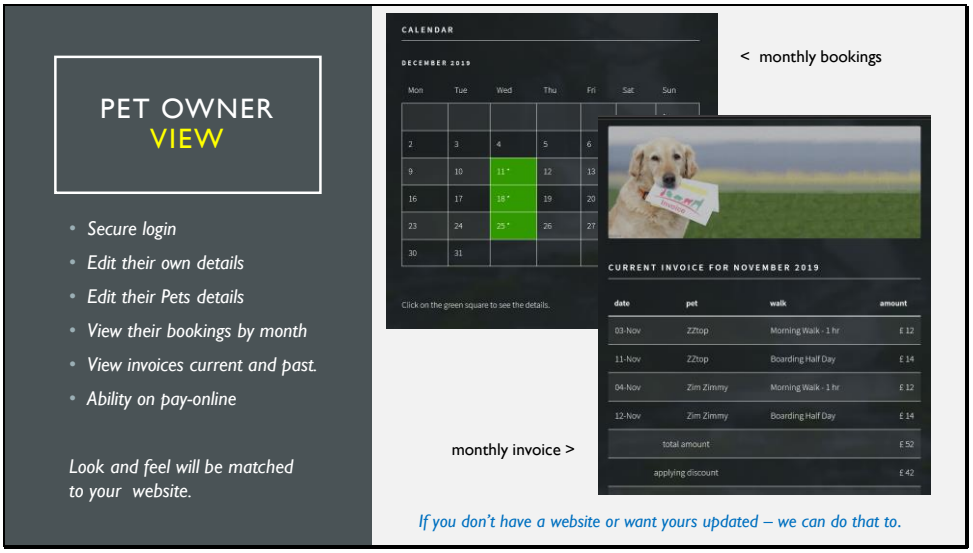


The mobile

This is mobile version of the home page.

The mobile views we have tried to make as similar as possible to tablet view for easy of navigation.

Slide 9



Client View
The client is very different.

Firstly they log on via your website - a simple button –
The "style" of this area will depend on the look and feel on your website. We copy and match styles where can.

Secondly
They only have access to limited in formation.

We can also built your website if don't have one or want your current one updated.
